

SUCTION AND WRAP PHONE HOLDER

INSTRUCTION MANUAL

Ever wished you could put your phone exactly where you need it instead of where a standard mount says it should go?

This flexible wrap-around phone holder bends, twists, grips and holds to almost anything. Wrap it around a bed rail, hook it over a side table, secure it to a wheelchair frame, attach it to a walker or rollator, clip it onto a bike, IV pole, car headrest bar, or even public transport poles. If there is something to grip, this holder will usually find a way.

It is lightweight but sturdy, strong yet flexible, and designed to move with you. Whether you are watching hands-free, video calling, navigating, reading, or keeping your phone within reach, you can position it exactly how it works best for you.

Shape it. Wrap it. Take it anywhere.

Great for:

- Hands-free video calls in bed or on the couch
- Wheelchair frames and side guards
- Walkers and rollators
- Bike handlebars
- Bed rails and hospital setups
- IV poles or medical stands
- Car headrest bars for passengers
- Public transport poles
- Reducing the need to constantly hold your phone
- Supporting limited grip strength or hand fatigue

SUCTION AND WRAP PHONE HOLDER

INSTRUCTION MANUAL

Features:

- Fully flexible wrap-around arm
- Bendable internal wire core for custom shaping
- Secure clamp to hold your phone in place
- Lightweight at only 110g
- Easy to pack and take on the go
- No tools required

Image Description: Flexible wrap-around phone holder with a clamp-style phone mount and bendable arm, shown wrapped around poles, rails, and handlebars in different positions. Available in black and green.

Details:

Material: High Density Rubber, Wire, Plastic

Size: 55cm (L) x 3cm (W) x 2cm (Diameter).

Weight: 110 grams

Package includes: 1x Phone Holder

Age Guidance: Designed for teens and adults; supervision recommended for younger children. Not a toy.

How to Use:

Suction Method:

1. Wipe down the window, mirror, or smooth tile to remove dust or oil (this gives the suction cups the best grip).
2. Bend the flexible black arm into the rough shape or angle you want.
3. Firmly press the suction cups against the flat surface. For maximum stability, try to get at least 3 or 4 of the suction cups firmly stuck down.
4. Pull open the jaws of the plastic clamp and place your phone inside. It can hold your phone horizontally or vertically.
5. Let the spring-loaded clamp snap firmly around the sides of your phone. Give it a gentle wiggle to ensure it is secure.

Wrap Method:

1. Coil the flexible body tightly around the pole or bar.
2. Because there is a flexible metal wire inside, squeeze and mold the arm tightly around the object. The high-density rubber skin and the suction cups will naturally grip the surface to stop it from sliding or spinning.
3. Pull open the jaws of the plastic clamp and place your phone inside. It can hold your phone horizontally or vertically.
4. Let the spring-loaded clamp snap firmly around the sides of your phone. Give it a gentle wiggle to ensure it is secure.
