Over toothpaste mess? This self-sealing silicone toothpaste cap is such a simple little upgrade that makes brushing feel way less annoying.

No more toothpaste crust building up around the lid, no more caps left half-on, and no more toothpaste ending up through the drawer or bathroom bag. This cap stays on, seals itself after every squeeze, and helps you dispense smaller amounts more easily (without accidentally squeezing out half the tube!).

It's also super handy for kids, anyone who struggles with grip or coordination, and anyone who wants a cleaner, easier daily routine.

Great for:

- Kids learning to brush independently
- People with limited hand strength or grip
- Arthritis, sore hands, or reduced dexterity
- Shaky hands, tremors, or coordination challenges
- Sensory sensitivities (less mess = less stress)
- Keeping toothpaste tubes tidy and gunk-free
- Travel, school bags, toiletry kits, and on-the-go routines
- Dispensing smaller amounts with less waste

Features:

- Self-sealing design (no twisting open and shut every time)
- Helps control how much toothpaste comes out
- Easy to wipe clean
- Snug fit that stays securely in place
- Reusable and washable for hygiene
- Fits most standard screw-top toothpaste tubes (like Colgate)

TOOTHPASTE SELF-SEALING CAP

INSTRUCTION MANUAL

Image Description: A white silicone self-sealing toothpaste cap is shown fitted onto a toothpaste tube. The cap has a soft rounded top with a small opening that allows toothpaste to be squeezed out without removing the lid.

Details:

Material: Silicone

Size: 2.9cm (W) x 2.1cm (L)

Weight: 6 grams

Package includes: 1x Self Sealing Toothpaste Cap

Ages: Recommended for ages 3+ (with adult supervision for younger children).

How to use:

1. Unscrew and remove your toothpaste's original cap
2. Wipe the tube opening clean if there's any build-up
3. Line the silicone cap up with the toothpaste opening
4. Twist and push the cap on firmly until it feels snug and secure, you may need some force the first time
5. Gently squeeze the tube to push toothpaste through the top
6. Swipe your toothbrush across the top to collect the paste
7. Let go and the cap will self-seal automatically (no closing needed)

Watch our demo videos for visual guidance

Care Instructions:

- Wash the cap regularly with warm soapy water
- Wipe the top of the tube every few days to remove any residue
- If paste dries in the tip, rinse with warm water to loosen it, or pick off the dried debris
- Squeeze toothpaste onto toothbrush and use
- When swapping from one toothpaste tube to the next wash and dry it between uses
- Allow it to dry fully before popping it back on the next tube of toothpaste and follow directions for use.
